Engineering

Team
Front-end web
development

Referral

Developed critical user-facing components including the primary dashboard table and comprehensive referral management interface page—core modules handling user rewards, referral tracking, and status monitoring with dynamic filtering and responsiveness that met the acceptance criteria.

STATUS

Deployed

Reverification

Contributed to the development & deployment of a new feature in the pipeline by creating custom dynamic components, optimizing user flow, and identifying system improvements, while collaborating with pod members to ensure seamless production synergy, which enhanced my problem-solving skills and assertiveness.

STATUS

Deployed

Self-service

Key contributions were made to the development of the self-service application, transitioning from working primarily with pre-built components to creating dynamic ones for the team. I actively identified and resolved issues, engaged the team on progress, and proactively addressed blockers to ensure smooth development.

Status: Testing

Proactive Problem Solving

- During my technical onboarding and active development in the MAXONE codebase, I was able to notice some UI discrepancies and bugs.
- I noted and reached out to the Product Manager on the UI issues that I perceived correctly were an issue to the users across MAXONE.
- In the development of new features, I was able to pinpoint to the team, additions that will influence better UI experience as comparable to the prototype.

Challenges Faced & Resolutions

- Steep learning curve with the T3 stack(ReactJS, NextJS, TailwindCSS, and TypeScript), Integrating APIs & React Libraries and Github Actions..
 - I enrolled in Udemy course, read documentation and Youtube learning.
- Navigating & understanding the complex MAXONE codebase.
 - I reached out to the team and personal walkthroughs.
- Working in a fast paced AGILE environment.
 - I used different means to track better time management and ensured to reach out upon any personal blockers.

Achievements

- Proficiency in T3 Stack, Integration & testing of APIs, Chakra UI & other React Libraries.
- Developed a deeper understanding in the complex architecture and implementations in MAXONE.
- Active involvement from the talking stage to the deployment stage of two large scale applications, along with what it entails: the planning, development, testing and deployment, ensuring its success.
- Fully engaged actively in communication and problem solving with members in the POD and outside of my department.

TIPS

The core values could easily be seen in the maxians I came across with and I took it up as a challenge to inculcate them.

Team collaboration

Creating synergy with teams virtually, while maintaining proper communication.

Seminars & Webinars

A good amount of very insightful seminars and webinars were held which aided in understanding how the company works, balancing work & health as well as being 'cyber-hygienic'.

Business Communication Training

This awakening training helped me to pinpoint areas in the way i communicate at work, arrange my ideas and professional development.

Brand & Marketing

Understood the importance of the brand and marketing team and partnered with them on some projects, also ran some pitches to them to see how more awareness can be created.

Key Takeaways

- I can confidently call myself a Software Engineer.
- Flowing into an Agile environment, using resources that help with time management and progress tracking.
- Working in active collaboration with a team.
- Professionalism and active business communication.
- Personal development leads to all-round maximum results.
- Business logic and strategies.
- Development & deployment of large scale applications.

Future Goals

There's no stopping now, the pace has already been set! I look forward to:

- Improving the way i communicate in terms of networking in business.
- Advancing my knowledge in T3 stack and have picked an interest in mobile development.
- Attending trainings that will gear me towards meeting my goals at a more reliable rate.

Appreciation & Acknowledgement

This cannot be complete without me acknowledging and appreciating those who have been a great leap in my transformation & growth.

From the initial stage of the onboarding to every single milestone, Bose Otaigbe, you have been a stronghold & counsellor.

To all the members of the Front-end team, members of my POD, Afeye & team, and all Maxians who have welcomed, educated, and assisted me in one way or another, What may seem like nothing has truly paved a path for me.

Finally, with a sincere and grateful heart, I want to say a big thank you to MAX, Managers & Operations for sowing a fruitful seed in my life.

Q&A

Any questions?

Thank You!
